

AGAVE WEBERI WEBER AGAVE

This agave is often seen in the southwestern United States and parts of Mexico, but only in cultivation, as there do not appear to be any wild specimens left. This large plant may reach 6 feet in height and up to 10 feet across. The grey-green leaves have fine teeth along the margins of the lower end of the leaf and a sharp terminal spine. The flower spike is branched, producing yellow flowers and occasionally bulbils as well. Plants require full sun to part shade to look their best. Yellowing of the foliage may indicate heat stress and a need for more water. Hardy to 10°F. USDA Zone 7.

AT A GLANCE SUMMARY	
SIZE (H X W)	5 feet x 6-10 feet
FLOWER COLOR	Yellow
FLOWER SEASON	Flowers at maturity
EXPOSURE	Full sun, part shade
WATER	Low
GROWTH RATE	Moderate to fast
HARDINESS	10° F, USDA Zone 7
PRUNING	None
