

CHILOPSIS LINEARIS LUCRETIA HAMILTON™ DESERT WILLOW

Desert willow trees occur along washes throughout the southwestern U.S. and northern Mexico. This small deciduous tree has narrow, light green leaves that give it a weeping appearance. In the summer, the tree is covered with fragrant, trumpet-shaped flowers. In the wild, the flower colors range from white to purple, although a pale pink to lavender flower color is the most common. The *Lucretia Hamilton*™ clone was selected for its intense, deep pink to purple flower color and its small stature. While many Desert willow trees can grow to 25 feet tall and wide, this clone seems to stay below 18-20 feet tall and wide. After flowering, long narrow seed pods are produced. Plant *Chilopsis linearis* in full sun and well-drained soil, and in regions where temperatures do not drop below 0° F. USDA Zone 6.

AT A GLANCE SUMMARY

SIZE (H X W)	18-20 feet x 18-20 feet
FLOWER COLOR	Burgundy
FLOWER SEASON	Spring - Summer
EXPOSURE	Full sun, part shade
WATER	Low
GROWTH RATE	Moderate
HARDINESS	0° F, USDA Zone 6
PRUNING	Prune to shape
