

## FRAXINUS VELUTINA ARIZONA ASH

This deciduous tree is native to much of the southwestern U.S. As the tree matures the form changes from pyramidal in youth to broadly oval. Most specimens are 30 feet in height but some may reach 60 feet tall. The compound leaves are usually about 6 inches in length, with 5 to 9 leaflets. The leaves are shiny green, with a velvety feel to them when young. This plant is separately sexed, with inconspicuous flowers. Female trees produce clusters of winged fruit known as samara that turn a straw color when ripe. Provide moderate to ample summer irrigation.

### AT A GLANCE SUMMARY

SIZE (H X W)	30-60 feet x 30-40 feet
FLOWER COLOR	Green
FLOWER SEASON	Spring
EXPOSURE	Full Sun
WATER	Moderate
GROWTH RATE	Moderate
HARDINESS	-10° F, USDA Zone 6
PRUNING	To Thin & Shape
