

PHLOMIS FRUTICOSA JERUSALEM SAGE

This native of the Mediterranean grows on dry rocky cliffs in its native habitat, and has proven fairly reliable in the low deserts of the Southwest. Jerusalem sage is an evergreen shrubby perennial that grows to 3 feet tall and wide. Its thick leaves are green on top, and silvery white on the undersides. In the spring it produces eye-catching whorls of bright yellow flowers. For best results plant under the shade of desert trees, and provide good drainage. Hardy to about 20° F. USDA Zone 9.

AT A GLANCE SUMMARY	
SIZE (H X W)	3 feet x 3 feet
