

## SENNA NEMOPHILA syn: CASSIA NEMOPHILA DESERT CASSIA

This rounded evergreen shrub has bright green needle-like foliage known as phyllodes. An Australian native, it produces masses of bright yellow pea-like flowers in the early spring. The flowers are followed by brown papery seedpods that persist on the plant. Due to the small size of the leaves, it may be sheared once flowering has ceased, or informally pruned to control the size. It may reach 6 to 8 feet in height and width if left unpruned. Plant in full sun, reflected heat and provide good drainage.

| AT A GLANCE SUMMARY |                           |
|---------------------|---------------------------|
| SIZE (H X W)        | 6-8 feet x 6-8 feet       |
| FLOWER COLOR        | Yellow                    |
| FLOWER SEASON       | Late Winter, Early Spring |
| EXPOSURE            | Full Sun, Reflected Heat  |
| WATER               | Low                       |
| GROWTH RATE         | Fast                      |
| HARDINESS           | 10° F, USDA Zone 7        |
| PRUNING             | Shear as pods develop     |
