

SPOROBOLUS WRIGHTII GIANT SACATON

This grass is native from west Texas to southeastern Arizona at elevations from 2000 to 7000 feet. It is found in dry, alkaline, sandy open areas or rocky slopes. Giant Sacaton is a great accent grass, growing up to 4 feet tall. Showy, branched feather-like seed heads are produced on slender stalks to 7 feet tall in late summer. The gray green leaves fade to yellow in the fall and turn beige in the winter. Plants may be cut back in late winter for fresh regrowth in the spring. Deep rooted and very tough, this is an excellent choice for alkaline conditions.

AT A GLANCE SUMMARY	
SIZE (H X W)	4-5 feet x 4-5 feet
FLOWER COLOR	Green
FLOWER SEASON	Late Summer - Fall
EXPOSURE	Full Sun
WATER	Low
GROWTH RATE	Fast
HARDINESS	-30° F, USDA Zone 4
PRUNING	To Rejuvenate
