

YUCCA HARRIMANIAE HARRIMANS' YUCCA

This is a fairly small yucca native to northern Arizona and New Mexico, southern Utah and southeast Colorado at elevations from 7500 to 8500 feet. Typically stemless, this plant forms a rosette of leaves and may reach a height ranging from a diminutive 5 inches to 22 inches. The leaves may also vary widely in length and color: four inches for shorter plants and 18 inches for larger specimens; in hues of yellow to blue-green. The leaves have a brownish stripe along the margins from which arise white filaments. Greenish-white flowers occur on a short stalk mid-summer. This is an extremely cold hardy yucca capable of surviving temperatures to at least -20° F. USDA Zone 5.

AT A GLANCE SUMMARY

SIZE (H X W)	1/2-1 foot x 1 foot
FLOWER COLOR	White to Green
FLOWER SEASON	Summer
EXPOSURE	Full Sun
WATER	Low
GROWTH RATE	Slow
HARDINESS	-20° F, USDA Zone 5
PRUNING	Remove Spent Flower Stalks
