

ACACIA SALICINA WILLOW ACACIA

This evergreen Australian native has narrow green leaves and a weeping growth habit, making it ideal for use around water features or in oasis zones. It is more tall and narrow than most desert trees, reaching a mature size of 40 ft tall by 20 ft wide. Fragrant, creamy white puffball flowers may appear anytime during the year. This tree requires deep, infrequent irrigation to develop a strong anchoring root system, and summer pruning to thin the canopy reduces wind resistance. Hardy to 20 °F. USDA Zone 9.

AT A GLANCE SUMMARY

SIZE (H X W)	40 feet x 20 feet
FLOWER COLOR	White
FLOWER SEASON	Off and on all year
EXPOSURE	Full sun, reflected heat
WATER	Low, Deep Irrigations
GROWTH RATE	Fast
HARDINESS	20° F, USDA Zone 9
PRUNING	Thin as needed
