

## AGAVE MULTIFILIFERA CHAHUIQUI

This wonderful agave forms a dense, solitary rosette comprised of numerous leaves. The leaf margins have prominent filaments, giving this plant a striking appearance. This plant is very slow-growing, but may ultimately reach a size of 3 feet tall by 4 feet wide. Older plants form a modest trunk. Native to the Mexican states of Chihuahua, Durango and Sinaloa, Chahuiqui is typically found at elevations from 4,500 to 6,500 feet. Its flower spike may rise to 16 feet, displaying greenish yellow flowers with pink tinges on the margins. Plant in full sun to part shade. Specimens in low deserts may require supplemental water. It is hardy to 15° F.

### AT A GLANCE SUMMARY

SIZE (H X W)	3 feet x 4 feet
FLOWER COLOR	Greenish yellow
FLOWER SEASON	Summer
EXPOSURE	Full sun to part shade
WATER	Low to moderate
GROWTH RATE	Slow
HARDINESS	15° F; USDA Zone 8
PRUNING	None
