

CUPRESSUS ARIZONICA ARIZONA CYPRESS

Arizona cypress is native to central Arizona, from 3000 to 8000 foot elevations. It performs well in hot, interior climates, and is cold hardy to -10° F. This fast-growing evergreen tree can reach a mature size of 30 to 40 feet tall by 20 feet wide. The foliage can vary from blue-green to silver, and is a nice contrast to the reddish-brown bark. Arizona cypress has inconspicuous flowers, followed by rounded reddish-brown cones approximately 1 inch in diameter. For many years this tree has been a favorite windbreak in high desert grasslands. It also is useful in erosion control. Plant Arizona cypress in full sun and well-drained soil, and provide deep, infrequent summer irrigations. USDA Zone 6.

AT A GLANCE SUMMARY	
SIZE (H X W)	30-40 feet x 20 feet
FLOWER COLOR	Insignificant
FLOWER SEASON	
EXPOSURE	Full sun
WATER	Low to Medium
GROWTH RATE	Moderate to Fast
HARDINESS	-10° F, USDA Zone 6
PRUNING	Prune to shape
