

ENCELIA FARINOSA BRITTLEBUSH

This fast-growing, mounding shrub occurs in sandy and gravelly soils over much of the southwestern U.S. and Mexico. Large, lance-shaped, gray leaves contrast with the bright yellow daisy-like flowers produced in the spring. It is extremely drought tolerant but in irrigated landscapes it may become quite lush and larger than plants existing on rainfall. If plants are overwatered they may rot out or become short-lived. The lance or ovate shaped leaves are a favorite of aphids, lacebugs and flea beetles. Plant in full sun and provide good drainage.

AT A GLANCE SUMMARY	
SIZE (H X W)	4 feet x 4 feet
FLOWER COLOR	Yellow
FLOWER SEASON	Spring
EXPOSURE	Full Sun
WATER	Low
GROWTH RATE	Fast
HARDINESS	15° F, USDA Zone 8
PRUNING	To Rejuvenate
