

HESPERALOE PARVIFLORA RED YUCCA

Hesperaloe parviflora is one of the most carefree plants you'll find, and it produces long-lasting flower spikes throughout the summer. The common red-flowering plants have been a staple in Southwestern landscapes for years. *Hesperaloe parviflora* forms a three-foot clump of stiff, leathery, grey-green leaves. The pink-red tubular flowers attract hummingbirds. This tough plant thrives in full sun, reflected heat, and even tolerates some light shade if drainage is adequate. This native of Texas and northern Mexico also makes a great container plant, and is a clean choice for pool areas.

AT A GLANCE SUMMARY

SIZE (H X W)	3 feet x 3 feet
FLOWER COLOR	Red to Pink
FLOWER SEASON	May - September
EXPOSURE	Full Sun, Part Shade
WATER	Low
GROWTH RATE	Slow to Moderate
HARDINESS	-20° F, USDA Zone 5
