

LOTUS RIGIDUS DEER VETCH

This durable perennial is native to Arizona, southern Utah, Nevada, California, and northwestern Mexico. Narrow, gray-green compound leaves occur on upright stems. In the spring the plant is sprinkled with yellow and orange pea-shaped flowers. Plant in full sun and reflected heat, and provide good drainage. This plant is quite xeric but it may shed leaves during drought. Too much water may cause it to become leggy. It may be pruned heavily to initiate new growth.

AT A GLANCE SUMMARY	
SIZE (H X W)	1.5 feet x 2 feet
FLOWER COLOR	Yellow & Orange
FLOWER SEASON	Spring
EXPOSURE	Full & Reflected Sun
WATER	Low
GROWTH RATE	Moderate
HARDINESS	0° F, USDA Zone 7
PRUNING	To Rejuvenate
