

NOLINA MATAPENSIS TREE BEAR GRASS

A Mexican native, this lush-looking species has long, strap-like, glossy green leaves with sharp edges. It is an arborescent plant, which means it will slowly develop a stout trunk over time. As this is a large specimen plant with sharp leaf margins, it should be provided ample room for growth away from walks and paths. Old foliage will turn brown and cling to the trunk, but may be removed if desired. Bees will be attracted to the flowers.

AT A GLANCE SUMMARY	
SIZE (H X W)	12-15 feet x 6 feet
FLOWER COLOR	White
FLOWER SEASON	Summer
EXPOSURE	Full Sun, Reflected Heat, or Part Shade
WATER	Low
GROWTH RATE	Slow
HARDINESS	15° F, USDA Zone 8
PRUNING	Remove spent flower stalk
