

PENSTEMON SUPERBUS CORAL OR SUPERB PENSTEMON

This stunning Penstemon shoots up spikes of vivid coral flowers as tall as six feet in the spring. The tubular flowers attract hummingbirds. You might combine this species with some of the smaller selections for a layered effect. It has glaucous, gray-green leaves. Coral Penstemon occurs at elevations of 3500-5500 feet, in the rocky canyons and washes of Arizona, New Mexico, and northern Mexico.

AT A GLANCE SUMMARY	
SIZE (H X W)	4-6 feet w/ stalk x 1-2 feet
FLOWER COLOR	Coral
FLOWER SEASON	Spring
EXPOSURE	Full Sun, Part Shade
WATER	Low -Moderate
GROWTH RATE	Fast
HARDINESS	-10° F, USDA Zone 5
PRUNING	Remove Old Flower Stalks
