

## PURSHIA PLICATA ANTELOPE BUSH

This member of the rose family is native to the Chihuahuan Desert in northeast Mexico, primarily in the state of Nuevo Leon. Antelope bush is at home in the dry grasslands of the upland scrub and oak/juniper forests. The foliage resembles that of our native cliffrose, with small, 3-5 lobed, dark green leaflets. During the warm months showy pink 5 petaled flowers provide color. The fruit is slender and feathery in appearance. Synonym: *Cowania plicata*.

AT A GLANCE SUMMARY	
SIZE (H X W)	3-6 feet x 3-6 feet
FLOWER COLOR	Pink
FLOWER SEASON	Spring - Fall
EXPOSURE	Full to Partial Sun
WATER	Low
GROWTH RATE	Moderate
HARDINESS	10° F, USDA Zone 7
PRUNING	To Shape
