

SALVIA CLEVELANDII CHAPARRAL SAGE

Native to the coastal chaparral zone of southern California, this evergreen shrub has performed extremely well in both low and middle deserts. In very hot climates, plant chaparral sage in situations where it will have some relief from the summer sun. Allow plenty of room for this plant to grow, as it can reach a mature size in excess of 5 feet tall by 6 feet wide. The soft gray-green foliage of chaparral sage is extremely aromatic. The flower spikes are this plants most striking feature, with clusters of blue-violet flowers stacked like shish-kebobs along the spike. *Salvia clevelandii* also attracts butterflies and hummingbirds into the garden. Chaparral sage requires well-drained soil, and is hardy to 10° F. USDA Zone 7.

AT A GLANCE SUMMARY	
SIZE (H X W)	5 feet x 6 feet
